

Discover the benefits of modernization and save up with Azure SQL Database Managed Instance

MANAGED INSTANCE

Managed Instance provides the best of SQL Server with the benefits of a fully-managed service, allowing you to migrate your on-premise workloads to the cloud with minimal changes. Managed Instance also preserves all PaaS capabilities (automatic patching and version updates, automated backups,...), that drastically reduce management overhead and TCO.

ISSUES

- ◇ Are there performance issues with your SQL Server infrastructure?

- ◇ Do you have problems with updates, backups and availability of your SQL environment?
- ◇ Do you want to reduce the TCO of your SQL Server?
- ◇ Do you want to migrate your on-premise workloads to the cloud with minimal changes?

HOW IT WORKS

- ◇ First, we compare your current SQL environment with a switch to Managed Instance.
- ◇ We look at which databases we can transfer easily to a Managed Instance,

what manual work is required, and which code we will have to update.

- ◇ This gives you a good estimate of the expected time and costs.

WHAT KOHERA OFFERS

During a five-day Proof of Concept, we start with an intake workshop, to be able to determine the databases we'll migrate to a Managed Instance.

This is followed by an audit on-site, to check the database requirements and to make a migration plan. The last day of the POC, we migrate the chosen databases to a Managed Instance.

AGREEMENT
