

Modern Data Platform: make the most of your data with Azure Data Services

Delivering datasets to end users as quickly as possible is crucial for self-service BI for example. But unfortunately, it's no easy task. That's why we've developed a new data architecture in the cloud: Kohera's Modern Data Platform. You make the most of your data resource with a warehouse that's flexible, cost-efficient and future-proof.

FLEXIBLE AND COST-EFFICIENT OPERATION

You only use Azure Data Services when you need them, and so of course only pay for these moments. Traditional 'on-premises' data warehouses often operate for nothing. You use the data for analyses during the day, and at night their sole purpose is to load data. Thanks to our Modern Data Platform, you can switch this service off in the early hours, and still have up-to-date information for your employees to use in Power BI, for example, in the morning. You use less so you pay less, without any loss of productivity, and you

can upscale or downscale the environment when needed. Our customers can cope with peak moments perfectly on the Modern Data Platform, and still do their ad hoc analyses very quickly too.

FUTURE-PROOF

When you invest in a Business Analytics Platform, you hope to be able to work with it for a long time. This is why we installed the Modern Data Platform with the latest Azure standards and features, to gain insights from our data with minimal effort. It can handle all kinds of inputs: Internet of Things, your CRM or ERP, HDInsight and Stream Analytics, Azure Data Lake Storage, Data Factory, Data Catalog,... Even machine learning is possible. If you think about it, who doesn't want self-learning algorithms to analyse your data and keep you a step ahead of the competition? For some of our customers the possibilities of machine learning are endless, so this technology is already vital for them.

HOW KOHERA CAN HELP YOU

With our own blueprint for this cloud data platform, we can quickly plug in your data sources so you can get started straight away. We follow this blueprint over the course of a 5-day proof of concept, where we set up your environment in Azure and load your input sources to ensure you can see the results in Power BI. We also draw up a roadmap of the next steps together with you. Even in an international context Kohera's cloud data platform has proven to be completely future-proof.

SUMMARY

- You use less so you pay less
- future proof
- 5-day proof of concept
