

Discover the benefits of modernization

Azure SQL has different offerings for running your SQL databases in the cloud. Varying from installing SQL Server on a virtual machine until running your databases fully managed in an Azure SQL Database. Are you getting overwhelmed by the possibilities and wonder if cloud would be a good fit? Worry no more! We will guide you through the process, from assessment until migration.

Issues

- Are there performance issues with your SQL Server infrastructure?
- Do you have problems with updates, back-ups and availability of your SQL environment?
- Do you want to reduce the TCO of your SQL Server?
- Do you want to migrate your on-premises workloads to the cloud with minimal changes?

How it works

- First, we investigate which Azure SQL solution suits your needs
- We look at which databases we can transfer easily, what manual work is required, and which code will have to be updated.
- We give you a good estimate of the expected time and costs.
- We migrate your database

What Kohera offers

During a five-day Proof of Concept, we start with an intake workshop, to be able to determine the databases we'll modernize and migrate. This will already show you the endless possibilities of the cloud. Next to this, we'll make a blueprint and a modernization roadmap for your SQL landscape. Based on this roadmap we can build a modernization plan together.
