

Audit Solution Kohera

Kohera.SQL offers a unique service to customers for performing check-ups on their SQL Server environment so that any issues are detected before they become real problems. We check your environment and provide a detailed report, giving you an overview of potential issues and advice on how to make improvements.

Issues

- Are there performance issues with your critical applications?
- Do you have a SQL Server maintenance plan in place?
- Can you lower operational and maintenance costs through SQL Server consolidation?
- Is your SQL Server configured in a secure way to protect your data?

Technical details

During the audit we will run different scripts and tools to get a complete picture of your SQL server landscape. After gathering all the information and configuration details, our consultants will create a detailed SQL server audit and recommendations document.

We cover

- SQL server Setup (IaaS, On-premises, Azure SQL DB flavours)
- SQL server Configuration
- Database Design
- Queries

Practical details

- Duration: 2 days
- 1 day audit on-site/remote
- 1 day writing report off-site Deliverables: detailed SQL Server Audit and Recommendations Document

Price

2500EUR (VAT excl.)
